String.java

Source History

```
public class StringJava {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        System.out.print("Enter the first string:");
        String str1 = scanner.nextLine();
        System.out.print("Enter the second string:");
        String str2 = scanner.nextLine();
        System.out.println("(Choose a string operation)");
        System.out.println("1. Find Length");
        System.out.println("2. Convert to Uppercase");
        System.out.println("3. Convert to Lowercase");
        System.out.println("4. Concatenate Strings");
        System.out.println("5. Check if Substring Exist");
        System.out.println("6. Check if String is Empty");
        System.out.println("7. Exit");
        while(true) {
            System.out.print("\nEnter your choice:");
            int choice = scanner.nextInt();
            scanner.nextLine();
            switch (choice) {
                case 1:
                    System.out.println("1. Length of first string:" + str1.length());
                    System.out.println("1. Length of second string:" + str2.length());
                    break;
            }
        }
    }
}
```
